

# selecting a down duvet that meets your needs

**what is “down”?** Down is the fluffy insulating layer that grows under the feather layer on the abdomen area of water fowl such as geese or ducks. Down is three-dimensional and lofts (fluffs up) allowing it to collect and insulate air within.

**what is “fill power”?** Fill power is a measure of the loft or “fluffiness” of a down product. The higher the fill power, the more insulating air pockets the down has and the better insulating ability.

## Fill Power Rating Guide:

Good 500+ *fill power*

Better 600+ *fill power*

Best 700+ *fill power*

The higher  
the fill power,  
the better the  
quality of the  
down in your  
duvet!

# down duvet weights & sizes

**Beddington's Down Duvets** are available in a variety of weights and sizes. Below is a quick reference chart to help you choose the one that is right for you.

**Weight vs. Fill Power:** The best quality down duvets (those with the higher fill power) require lower ounces (weight) of down due to their exceptional thermal properties.
